ivendlocker

SCOTT DIRECT

iVendLocker is a locker based industrial vending solution which speeds up the process of distributing your inventory and assets – eliminating a significant level of downtime.

Securely expanding dispensation

By effectively tracking where a tool was used and who used it, you can eliminate the guesswork behind the journeys of each asset. With the access-controlled, flexible solution of iVendLockers, you can overcome the challenges associated with tool distribution in your business.

See how **iVendLocker** can transform your stores management by getting in touch with one of our advisors.

Scalable and transparent dispensation

As your operation grows or you need to expand your control to other areas of your facility, iVendLockers can simply connect to each other to create an expandable bay of cabinets to dispense whatever items you require. These lockers come standard with clear fronts for easy visibility of inventory.

- **Overall Dimensions:** 1870mm(H), 1033mm(W), 500mm(D)
- **Row Configuration:** 1–12 rows
- **Column Configuration:** 3–5 columns
- **Door Configuration:** 9–60 doors depending on numbers of rows/columns

How secure industrial inventory vending works for you

The system operation of iVend is extremely simple...

1 Supplies accessed

The user swipes their ID card to gain access to the cabinet and removes the required items. This is a secure lock down with issuance by user. This automatically creates a log of what was taken, by who and when.

2 Requirement generation

Individual stock requirements at all locations are calculated in real-time, with data passed instantly to Sourcerer.

3 Automated replenishment trigger

A reorder is automatically generated if Sourcerer is integrated with the suppliers or end-user's ERP. If not integrated, a reorder is prompted via Sourcerer's replenishment reports.

4 iVend Locker restocked

iVend Locker offers auto re-ordering through Sourcerer and multi supplier access to their own products. Delivery of the stock is automatically dated and time-stamped against the re-stocker.

Stores management inventory made easy

Features that enhance our stores management vending solution.

Ease of use

Spot purchase items on a touchscreen and secure issuance by user.

Traceability

Tools and products are securely stored, with ease of access for the users you allocate access to.

Accountability

Make users accountable and eliminate theft.

Quick restocking

Easily return the items to the locker if they're not required.

Automated stock control

Automatic re-ordering of items through Sourcerer.

Scalability

Lockers can be customised by size and shape depending on requirements and space.

Supplier fulfilment solved

Allow multiple suppliers access to their own products so that they can raise requests for replenishment requirements.

Easy to expand

Ability to run secondary machines from the primary touchscreen.
